

RICHARD OMOROTIONMWAN

Software Engineering | AI & MCP Integration

Oakland, CA | iheoma.richard@gmail.com | +1-628-468-8729 | linkedin.com/in/richardomor | github.com/iheomach

PROFILE

Software engineer and full-stack builder with hands-on experience designing agentic AI systems, MCP-connected workflows, and production-grade integrations. At Meta, built LLM-powered diagnostic agents that automated investigation of 1,000+ production pipelines. Independently shipped Ogwu, an end-to-end agentic telehealth platform with a multi-tool LangGraph agent, AWS event pipeline, and an LLM-as-a-judge eval suite. Fluent in translating business problems into working technical demos and prototypes that make solutions tangible for real audiences.

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, PHP, SQL, Bash, C++, Java

AI & Agentic Systems: LangGraph, OpenAI API, Claude API, MCP (Model Context Protocol), agent orchestration, tool-calling, RAG pipelines, pgvector, LLM-as-a-judge eval, LlamaGuard

Integration & APIs: REST APIs, webhooks, OAuth, async event-driven architecture, multi-platform workflow orchestration

Frontend & Prototyping: React, React Native, Next.js, Node.js/Express, rapid full-stack prototyping

Cloud & Infrastructure: AWS (Lambda, SQS, EventBridge, S3, Textract), Azure, Terraform, Docker, GitHub Actions CI/CD

Data & Databases: PostgreSQL, MySQL, dbt, Databricks, PySpark, Supabase

EXPERIENCE

Infrastructure Support Engineer | Meta (contract via Crystal Equation)

Oct 2025 – Present

San Francisco, CA

- Built **Claude-powered diagnostic agents** on Meta's internal agentic framework, automating failure investigation across 1,000+ Scuba real-time analytics pipelines using LLM tool-calling and retrieval; directly reduced mean time to resolution.
- Designed and shipped **AI-driven automation workflows** that translate infrastructure state into actionable remediation steps, demonstrating end-to-end integration of LLMs with production systems.
- Built React.js features for internal operational tooling and developed unit and CI-based test cases, preventing malformed table storage requests from entering the system.
- Performed on-call incident triage across distributed infrastructure: reproducing issues, debugging across system boundaries, and driving cross-functional remediation under time pressure.

Data & AI Platform Engineer Intern | Alberta Investment Management Corporation (AIMCo)

Sep 2024 – Oct 2025

Edmonton, AB

- Designed and deployed Terraform-automated infrastructure provisioning (Databricks Unity Catalog, ADLS, service principal role assignments) with an Azure DevOps CI/CD pipeline, eliminating manual release steps.
- Built an automated reporting pipeline integrating Databricks, SQL, Power BI, and Microsoft Copilot AI, **cutting reporting time by 93%**; demoed the solution to business stakeholders across IT and finance.
- Collaborated across engineering and business teams to identify automation opportunities, scope requirements, and deliver reliable solutions on tight timelines.

Data Analyst Co-op | Suncor Energy

May 2023 – Aug 2024

Calgary, AB

- Wrote an OOP Python application to automate risk hierarchy generation from SQL parent-child relationships, replacing a manual workflow entirely.
- Built an end-to-end automated reporting pipeline with Power Automate, Blob Storage, Databricks, and PySpark ETL, cutting manual reporting effort by 50%.

PROJECTS

Ogwu | LangGraph, Node.js, React Native, OpenAI, AWS, Supabase, pgvector
github.com/iheomach/ogwu

- Built an **8-tool LangGraph agentic platform** integrating hospital search by GPS, Google Calendar booking, drug interaction checks, emergency escalation, and patient history retrieval — a live end-to-end demo of complex multi-service agent orchestration.
- Implemented an **LLM-as-a-judge CI eval suite** (60 test cases, 85% CI pass threshold) triggered on every prompt and graph change via GitHub Actions, cutting iteration time by 40%.
- Designed a **RAG pipeline** using AWS Textract for document extraction, overlapping chunking into pgvector, and cosine similarity retrieval; built event-driven AWS pipeline (S3, EventBridge, Lambda, SQS, DLQ) with end-to-end observability.
- Shipped full patient-facing React Native app and Next.js doctor dashboard; platform covers hospital data across all Nigerian and Indian states with multilingual support.

EDUCATION

M.S. Computer Science, ML Specialization | Georgia Institute of Technology (OMSCS)
2026 - 2029

B.S. Computer Science | University of Alberta
2020 – 2025

CERTIFICATIONS

Microsoft Azure AI Engineer Associate (AI-102) | Microsoft Azure Fundamentals (AZ-900)
